

LISTING OF CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Previously Presented) Apparatus for transmitting network-related information, comprising:

means for receiving a request for first network information;

means for retrieving first network information having interactive elements;

means for creating second network information based on the first network information, the second network information comprising display information and definitions based on characteristics of the interactive elements; and

means for transmitting the second network information.

2. (Previously Presented) The apparatus according to claim 1, wherein the means for receiving a request includes:

means for capturing information related to the current session.

3. (Original) The apparatus according to claim 1, wherein the means for retrieving network information includes:

means for accessing the Internet.

4. (Previously Presented) The apparatus according to claim 1, wherein the means for transmitting includes:

means for translating the display information from a first format to a second format.

5. (Cancelled).
6. (Original) The apparatus according to claim 1, further comprising:
means for receiving user requests related to the definitions.
7. (Previously Presented) A method for transmitting network-related
information, comprising:
retrieving first network information having interactive elements;
creating second network information based on the first network information, the
second network information comprising display information and definitions based on
characteristics of the interactive elements; and
transmitting the second network information.
8. (Previously Presented) The method according to claim 7, further
including:
capturing information related to the current session.
9. (Original) The method according to claim 7, wherein the step of retrieving
network information includes the substep of:
accessing the Internet.

10. (Previously Presented) The method according to claim 7, wherein the step of transmitting includes the substep of:

translating the display information from a first format to a second format.

11. (Cancelled).

12. (Original) The method according to claim 7, further comprising the step of: receiving user requests related to the definitions.

13. (Original) A system for handling network information transfer between a network and a user device, comprising:

means for receiving a network request from a user device for first network information;

means for retrieving the first network information;

means for processing the first network information to create second network information comprising a user interface element definition and display information;

means for transmitting the second network information over a communications media; and

means for receiving the second network information and recomposing the second network information to form third network information for the user device.

14. (Previously Presented) The system according to claim 13, wherein the means for receiving a request for first network information includes:

means for capturing information related to the current session.

15. (Original) The system according to claim 13, wherein the means for retrieving network information includes:

means for accessing the Internet.

16. (Previously Presented) The system according to claim 13, wherein the means for transmitting includes:

means for translating the display information from a first format to a second format.

17. (Cancelled).

18. (Original) The system according to claim 13, further comprising:

means for receiving a user request related to the definitions.

19. (Original) The system according to claim 18, wherein the means for receiving a user request related to the definitions includes:

means for recomposing the third network information in response to the user request related to the definitions.

20. (Original) The system according to claim 18, wherein the means for receiving a user request related to the definitions includes:

means for transmitting information related to the user request related to the definitions to the means for receiving a request.

21. (Previously Presented) The system according to claim 13, wherein the means for transmitting the second network information over a communications media includes:

means for transmitting the second network information to a first user device; and
means for transmitting the second network information to a second user device.

22. (Original) The system according to claim 13, further comprising:
means for receiving a user request from a first user device; and
means for receiving a user request from a second user device.

23. (Cancelled).

24. (Cancelled).

25. (Original) A method for handling network information transfer between a network and a user device, comprising:

receiving a network request from a user device for first network information;
retrieving the first network information;

processing the first network information to create second network information comprising a user interface element definition and display information;
transmitting the second network information over a communications media; and
receiving the second network information and recomposing the second network information to form third network information for the user device.

26. (Previously Presented) The method according to claim 25, wherein the step of receiving a request for first network information includes a substep of:
capturing information related to the current session.

27. (Original) The method according to claim 25, wherein the step of retrieving network information includes a substep of:
accessing the Internet.

28. (Previously Presented) The method according to claim 25, wherein the step of transmitting includes a substep of:
translating the display information from a first format to a second format.

29. (Cancelled).

30. (Original) The method according to claim 25, further comprising:
receiving a user request related to the definitions.

31. (Original) The method according to claim 30, wherein the step of receiving a user request related to the definitions includes a substep of:

recomposing the third network information in response to the user request related to the definitions.

32. (Original) The method according to claim 30, wherein the step of receiving a user request related to the definitions includes a substep of:

transmitting information related to the user request related to the definitions over the communications media.

33. (Original) The method according to claim 25, further comprising:

receiving a user request from a first user device; and

receiving a user request from a second user device.

34. (Cancelled).

35. (Cancelled).

36. (Previously Presented) Apparatus for requesting and receiving network information, comprising:

means for receiving a user interface element definition related to a network information request;

means for receiving first network information related to the interface element definition and the request;

means for recomposing using the user interface element definition and the network information to form device information; and

means for presenting the device information to a device.

37. (Previously Presented) The apparatus according to claim 36, further comprising:

means for receiving the network information request; and

means for transmitting the request.

38. (Previously Presented) The apparatus according to claim 37, wherein the means for recomposing includes:

means for receiving user request information from the means for receiving the network information request, and recomposing the device information based on the user request information.

39. (Original) The apparatus according to claim 36, wherein the user interface element definition includes:

definitions of Web page user interface graphics.

40. (Original) The apparatus according to claim 36, wherein the network information includes:

MPEG information.

41. (Previously Presented) A method for requesting and receiving network information, comprising:

receiving a user interface element definition related to a network information request;

receiving first network information related to the interface element definition and the request;

recomposing using the user interface element definition and the network information to form device information; and

presenting the device information to a device.

42. (Previously Presented) The method according to claim 41, further comprising the steps of:

receiving the network information request; and

transmitting the request.

43. (Original) The method according to claim 42, wherein the step of recomposing includes a substep of:

receiving user request information and recomposing the device information based on the user request.

44. (Original) The method according to claim 41, wherein the user interface element definition includes:

definitions of Web page user interface graphics.

45. (Original) The method according to claim 41, wherein the network information includes:

MPEG information.

46. (Previously Presented) The apparatus according to claim 2, further comprising:

means for using the captured information in another request.

47. (Previously Presented) The method according to claim 8, further including:

using the captured information in another request.

48. (Previously Presented) The system according to claim 14, further comprising:

means for using the captured information in another request.

49. (Previously Presented) The method according to claim 26, further including:

using the captured information in another request.

50. (Previously Presented) Apparatus for transmitting network-related information, comprising:

a receiver device for receiving a request for first network information;

a retrieval device for retrieving first network information having interactive elements;

a second network information creation device for creating second network information based on the first network information, the second network information comprising display information and definitions based on characteristics of the interactive elements; and

a transmitting device for transmitting the second network information.

51. (Previously Presented) The apparatus according to claim 50, wherein the receiver device includes:

a capture device for capturing information related to the current session.

52. (Previously Presented) The apparatus according to claim 51, further comprising:

a request device for using the captured information in another request.

53. (Previously Presented) The apparatus according to claim 50, wherein the retrieval device includes:

an accessing device for accessing the Internet.

54. (Previously Presented) The apparatus according to claim 50, wherein the transmitting device includes:

a translation device for translating the display information from a first format to a second format.

55. (Previously Presented) The apparatus according to claim 50, further comprising:

a user request receiving device for receiving user requests related to the definitions.

56. (Previously Presented) A system for handling network information transfer between a network and a user device, comprising:

a receiver device for receiving a network request from a user device for first network information;

a retrieval device for retrieving the first network information;

a processor device for processing the first network information to create second network information comprising a user interface element definition and display information;

a transmitting device for transmitting the second network information over a communications media; and

a recomposing device for receiving the second network information and recomposing the second network information to form third network information for the user device.

57. (Previously Presented) The system according to claim 56, wherein the receiver device includes:

means for capturing information related to the current session.

58. (Previously Presented) The system according to claim 57, further comprising:

a request device for using the captured information in another request.

59. (Previously Presented) The system according to claim 56, wherein the retrieval device includes:

an accessing device for accessing the Internet.

60. (Previously Presented) The system according to claim 56, wherein the transmitting device includes:

a translation device for translating the display information from a first format to a second format.

61. (Previously Presented) The system according to claim 56, further comprising:

a user request receiving device for receiving a user request related to the user interface element definition.

62. (Previously Presented) The system according to claim 61, wherein the user request receiving device includes:

a recomposing device for recomposing the third network information in response to the user request related to the user interface element definition.

63. (Previously Presented) The system according to claim 61, wherein the user request receiving device includes:

a transmitting device for transmitting information related to the user request related to the user interface element definition to the user request receiving device.

64. (Previously Presented) The system according to claim 56, wherein the transmitting device includes:

a first transmitting device for transmitting the second network information to a first user device; and

a second transmitting device for transmitting the second network information to a second user device.

65. (Previously Presented) The system according to claim 56, further comprising:

a first user device request receiver for receiving a user request from a first user device; and

a second user device request receiver for receiving a user request from a second user device.

66. (Previously Presented) Apparatus for requesting and receiving network information, comprising:

a user interface element definition receiver device for receiving a user interface element definition related to a network information request;

a first network information receiving device for receiving first network information related to the interface element definition and the request;

a recomposing device for recomposing using the user interface element definition and the network information to form device information; and

an information presenting device for presenting the device information to a user device.

67. (Previously Presented) The apparatus according to claim 66, further comprising:

a network information request receiver device for receiving the network information request; and

an information request transmitting device for transmitting the request.

68. (Previously Presented) The apparatus according to claim 67, wherein the recomposing device includes:

a device information recomposing device for receiving user request information from the means for receiving the network information request, and recomposing the device information based on the user request information.

69. (Previously Presented) The apparatus according to claim 66, wherein the user interface element definition includes:

a definition of Web page user interface graphics.

70. (Previously Presented) The apparatus according to claim 66, wherein the network information includes:

MPEG information.
